## FOREWORD

The 1999-2000 National Survey on Recreation and the Environment (NSRE) is the latest in a series of national surveys that was started in 1960 by the Outdoor Recreation Resources Review Commission (ORRRC). The federal government (ORRRC) initiated this National Recreation Survey (NRS) to assess outdoor recreation participation in the United States. Since that first in-the-home survey in 1960, six additional NRS's have been conducted —1965, 1970, 1972, 1977, 1982-83 and 1994-95. Over the years, the NRS surveys have changed in their methodology, composition, funding, and sponsorship.

In 1960, interviews were done in person over the four seasons of the year. In 1965, interviewing was done only in early fall. The 1970 survey instrument was a brief mailed supplement to the National Fishing and Hunting Survey. The 1982 survey was conducted in person in cooperation with the National Crime Survey, and the 1977, 1994, and 2000 surveys were conducted by telephone.

In 1994 the NRS was renamed the National Survey on Recreation and the Environment (NSRE). This new name was introduced to reflect the growing interest and emphasis of the U.S. population about their natural environment. Accordingly, the NSRE was expanded to include questions concerning peoples' wildlife and wilderness uses, environmental values, and attitudes regarding public and management issues. Additional information pertaining to the recreational needs of people with challenging and disabling conditions was also included.

NSRE 2000 is the eighth in the continuing series of U.S. National Recreation Surveys. Although similar to the previous national surveys, NRSE 2000 explores the outdoor recreational needs and environmental interests of the American people in greater depth. The growth of NRSE 2000 reflects the continuing growth of interest in our nation in outdoor recreation and our natural environment.

NSRE 2000 is an in-the-home phone survey of 50,000 households across all ethnic groups throughout the United States. Questions from NSRE 2000 broadly address such areas as outdoor recreation participation, demographics, household structure, lifestyles, environmental attitudes, natural resource values (for example, concerning Wilderness), constraints to participation, and attitudes toward management policies.

The funding and responsibility of the NRS's have also changed quite considerably over the years. Initially the Outdoor Recreation Resources Review Commission, which did the first survey in 1960, recommended that subsequent surveys be completed at five-year intervals, but consistent funding and responsibility were not created. From 1965 through 1977, the Bureau of Outdoor Recreation and its successor, the Heritage Conservation and Recreation Service, did the research. Those agencies were abolished in 1981, and responsibility fell to the National Park Service in the U.S. Department of the Interior (USDI). The National Park Service coordinated the development of a consortium that included itself, the Forest Service in the U.S. Department of Agriculture (USDA), the

Department of Health and Human Service's Administration on Aging, and the USDA's Bureau of Land Management. By the late 1980's, it was clear that the National Park Service would no longer assume the financial and organizational demands of such a large survey. Park Service Officials asked the Forest Service to assume its coordinating role for the next National Recreation Survey. The Outdoor Recreation and Wilderness Assessment Group, a part of the research branch of the Forest Service, assumed this role jointly with the National Oceanic and Atmospheric Administration (NOAA). This joint role between the Forest Service Outdoor Recreation and Wilderness Assessment Group in Athens, GA and NOAA has continued to the present day and includes responsibility for the current NSRE 2000 survey.

The present list of sponsoring agencies for the 1999-2000 NSRE effort includes the USDA Forest Service, NOAA, the USDA's Economic Research Service, the U.S. Environmental Protection Agency, USDA Bureau of Land Management, the National Park Service, the University of Georgia, and the University of Tennessee. In addition, valuable assistance and resources were also provided by the American Horse Council, the American Motorcyclist Association, the American Recreation Coalition, B.A.S.S., Inc., the Carhart Wilderness Training Center, the Corps of Engineers, the Forest Service (specifically the Carhart Wilderness Training Center, Ecosystem Management Coordination, Recreation Staff, the Rocky Mountain Research Station, and Wildlife Staff), the Motorcycle Industry Council, the National Association of Recreation Resource Planners, the National Association of State Outdoor Recreation Liaison Officers, the National Environmental Education & Training Foundation, the Natural Resources Conservation Service, the Outdoor Recreation Coalition of America, the Rails-to-Trails Conservancy, the Recreation Vehicle Industry Association, the Snow Sports Industries of America, the U.S. Orienteering Federation, and the Wilderness Society.

All versions of the NSRE 2000 questionnaire and project results are being posted on the following World Wide Web site: <http://www.srs.fs.fed.us/recreation/nsre.html>

## INTRODUCTION

This report is the first in a series that describes the results of the Coastal Module of the 1999-2000 National Survey on Recreation and the Environment (NSRE 2000). The NSRE 2000, in general, was conducted to discover and describe: (1) participation by Americans in outdoor recreation activities, (2) opinions concerning management of both public and private forests and grasslands, (3) the importance and value of our natural environment, (3) uses and values of wildlife and wilderness, (4) people's lifestyles, and (5) recreational trips people take away from home. The NSRE 2000 data will be used by a variety of public and private organizations for both management and research purposes.

***Sampling Methodology.*** Data for the NSRE 2000 was obtained from random-digit-dialing (RDD) telephone surveys. The phone numbers for the NSRE 2000 survey were obtained from Survey Sampling, Inc (SSI). SSI subjects all their numbers to extensive cleaning and validation to ensure that all exchanges are currently valid. SSI provided the NSRE with a random-digit-dial (RDD) sample using a database of "working blocks." A block is a set of 100 contiguous numbers identified by the first two digits of the last four numbers (e.g., in number 559-4200, "42" is the block). A block is termed to be working if one or more listed telephone numbers are found in that block. Numbers are generated from all eligible blocks in proportion to their density of listed telephone households. As numbers are pulled, they are marked as used and are not available again during a nine-month period. Once numbers are selected, they are entered into the computer-aided telephone interviewing system (CATI).

The CATI system has two primary functions: (1) it facilitates the dialing and interviewing process; and (2) it manages the administrative functions associated with interviewing. For each interview, the CATI system randomly selects numbers for an interviewer, who then instructs the computer to dial that number. Upon reaching an appropriate person and receiving agreement to an interview, the interviewer reads the survey questions as they appear on the computer screen. Using a computer to control the survey, skip patterns are executed as intended, responses are within range, there are no missing data, and data entry occurs as the survey is administered. If no person is contacted, then a code is entered (e.g., busy, no answer). If the timing of the call is inconvenient, a call back is scheduled for another date and time. If an answering machine is obtained, a brief message is left explaining the NSRE 2000, its importance, and that we will endeavor to reach them at another time and date.

This report describes results from versions 1 through 6 of the NSRE 2000, which asked questions pertaining to people's participation in outdoor activities and the total numbers of days they spent participating in outdoor recreation activities. These first six versions of survey had a sample size of 27,854 Americans above the age of 16. The average length of interviews for this survey was 20 minutes. Data was collected from July 1999 through December 2000. A main goal of the NSRE survey is to achieve minimum sample sizes for each State to support the production of State reports. A sampling strategy has been created which, over-all the NSRE Versions, will provide a quota sample of 400 per State.

**Sample Weights.** The sampling approach used here, however, reaches a random sample of telephone numbers, rather than of people. Affluent families 'are virtually certain to have a telephone number and many have more than one. At the other end of the affluency scale, many low-income households may not have a telephone. As a result, affluent people may have been over represented somewhat in the survey sample. Demographic characteristics of the NSRE 2000 sample are compared with the September 1999 Census estimates of the civilian non institutionalized population for individuals 16 years or older and above (Table 1). The NSRE 2000 sample was weighted using multivariate weights for sex, age and race/ethnicity for the civilian non institutionalized population 16 years or older as of September 1999 from the U.S. Department of Commerce, Bureau of the Census (<http://www.census.gov>). In addition, because some portions of the sample involved over sampling of rural areas, the data are also weighted for the urban/rural distribution. The sample was also weighted for education to account for the possible bias from having a more affluent sample. The urban and education weights were multiplicative. The results summarized here are based on these weights.

## **PARTICIPATION**

**Definitions.** This report is about participation in *coastal recreation*. We defined coastal recreation as participation in 19 water-based or water-related activities/settings. For these activities/settings, respondents were first asked if they participated in the activity. Second, for activities that do not necessarily require water contact (e.g., Viewing Birds or Other Wildlife), respondents were then asked if they did the activity in a water-based surrounding. And, if so, they were then asked if they did the activity in freshwater, saltwater or both. Saltwater was defined as in oceans, bays or sounds and in mixed fresh-salt water in tidal portion of rivers.

**Participation Rate.** In all the tables included in this report, the column labeled "Participation Rate (%)" is the percent of the civilian non institutionalized population 16 years or older in all households of the U.S. that participated in a particular activity or visited a particular setting.

**Participants.** In all the tables included in this report, the column labeled "Number of Participants" is equal to the participation rate multiplied by the non institutionalized population 16 years or older in all households of the U.S. as of September 1999 or 206,171,709 (U.S. Department of Commerce, Bureau of the Census).

**Double Counting.** It is not appropriate to add the number of participants across activities/settings. The reason is that people can participate in multiple activities/settings. When we report the participation rate and the number of participants across activities/settings, we eliminate double counting. For example, the last line of Table 3 reports the participation rate and the number of participants that did "Any Coastal Activity". The estimate for the participation rate of 43.3% means that 43.3% did at least one of the 19 coastal activities during the past 12 months, and if a person did more than one activity, they are only counted once. The same is true for adding across States.

People reported on doing coastal recreation activities on up to five states. When adding across states, we also eliminate double counting.

***Any Type of Water Body/Freshwater.*** Table 2 reports the participation rates and number of participants for each of the 19 water-related activities/settings for any type of water body and for freshwater. Swimming was the number one ranked activity/setting for anybody of water and freshwater. Over 43 percent participated in swimming, which translates into over 89 million people age 16 or older for any type of water body. For freshwater, 28.5 percent participated in swimming or about 58.8 million people age 16 or older.

***Coastal Recreation.*** Over 43 percent participated in Any Coastal Activity (Table 3). This translates into over 89 million people age 16 or older. The number one activity/setting for coastal recreation was visiting beaches. Thirty (30) percent visited beaches, which translates into over 61.9 million people age 16 or older. As with any water body type and freshwater, swimming was a relatively high ranked coastal recreation activity. Over 25.5 percent participated in swimming (52.6 million people age 16 or older). Saltwater fishing ranked third among coastal recreation activities/setting with an estimated participation rate of 10.3 percent (21.28 million people age 16 or older).

Florida is ranked number one for participation in any coastal recreation with over 22 million participants. California was ranked second with almost 18 million participants. Table 4 provides estimates of the participation rates and number of participants for any coastal recreation by state. Again, participation is the number of people that did the activity in each State and includes people that may live in any State. So, again the participation rate is the percent of all non-institutionalized Americans age 16 or older that did the activity in each State. The District of Columbia is treated like a State for purposes of this report and is considered coastal because it lies along the tidal portion of the Potomac River.

***Any Coastal Diving or Swimming.*** Across all coastal states, over 54 million people age 16 or older participated in snorkeling, scuba diving or swimming (Table 5). This estimates adds the number of participants across the three activities without double-counting. Florida ranked number one with over 14.5 million participants, while California ranked number two with over 8.5 million participants.

***Any Coastal Diving.*** Across all coastal states, over 11.4 million people age 16 or older participated in snorkeling or scuba diving or 5.5 percent of all those age 16 or older. Again, Florida was ranked number one with over 3.1 million participants. Hawaii was ranked number two with over 2.3 million participants followed by California with over 874 thousand participants. No one reported doing any diving activities in the District of Columbia (Table 6).

***Any Coastal Boating.*** In Table 3, participation in seven different boating activities are reported (e.g., motorboating, sailing, personal watercraft use, canoeing, kayaking, rowing

and water-skiing). In Table 7, participation is reported for those that did at least one of the activities without double counting across activities. Across all coastal states, almost 27.7 million people age 16 or older participated in some kind of boating activity. Again, Florida was ranked number one with almost 5 million participants followed by California with almost 3.3 million participants. Maryland was ranked number three with over 1.5 million participants.

***Any Coastal Viewing Activities.*** In Table 3, participation in three separate viewing activities was reported (e.g., bird watching, viewing other wildlife and viewing or photographing scenery). In Table 8, participation is reported for those that did at least one of the viewing activities without double counting across activities. Across all coastal states, over 31.3 million people age 16 or older participated in viewing activities. Again, Florida was ranked number one with almost 7 million participants. California was ranked number two with over 6.3 million participants followed by Massachusetts with over 2.1 million participants.

***Visitation to Any Coastal Watersides.*** In Table 3, visitation to coastal beaches and non-beach watersides for outdoor recreation was reported. In Table 9, visitation to either of these settings is reported without double counting. Across all coastal states, over 64.6 million people age 16 or older visited coastal watersides for outdoor recreation, which is over 31 percent of all non-institutionalized Americans age 16 or older. Again, Florida was ranked number one with over 15.8 million participants followed by California with over 13.1 million participants.

### **Comparative Socioeconomic Profiles**

For comparison purposes, we divided the sample into three separate groups; 1) those that did at least one of the 19 water-related activities, but only in freshwater or freshwater surroundings, 2) those that did at least one of the 19 water-related activities in saltwater or saltwater surroundings, and 3) those that did none of the 19 water-related activities. Comparative socioeconomic profiles are presented for these three groups in Table 10.

Although at this stage of our research no formal statistical tests have been performed, there are fairly clear differences in characteristics such as sex, age, race/ethnicity, education and income between those that participated in water-related activities and those that did not. There are also clear difference in participation in water-related activities and urban residence. Clearly, a higher proportion of those that participated in coastal recreation live in urban areas.

There appear to be some differences between those that participated in freshwater versus saltwater activities, but the differences are not great enough to conclude there are differences without performing statistical tests.

For characteristics such as household or family size and employment and leisure status the differences are less clear. Formal statistical tests will be required to uncover any differences.

## **Future Reports**

Future reports on the full sample of 50,000 households will report greater detail. Here we give some preliminary estimates for participation for 23 coastal States plus the District of Columbia. For some activities, future efforts will estimate the number of days of activity by State of activity. Limitations will be based on sample sizes and our ability to reliably estimate the number of days of activity by State.

Also future reports will test for relationships between socioeconomic variables and participation and forecast participation into the future. Future reports will also report on environmental attitudes and lifestyles of those that participate in coastal recreation.

Table 1. Population and Sample Comparison

Demographic Characteristic	U.S. Bureau of the Census <sup>1</sup>	NSRE 2000 (unweighted)
SEX		
Male	47.8	43.6
Female	52.2	56.4
RACE		
White, Not Hispanic	74.2	83.0
Hispanic	10.2	6.6

Wind Surfing	0.81	1,659,744	0.46	939,651
Fishing	34.45	71,019,760	29.63	61,091,330
Motorboating	24.79	51,113,437	20.52	42,306,567
Sailing	5.07	10,445,548	2.70	5,563,676
Personal Watercraft Use	9.42	19,423,722	7.60	15,665,261
Canoeing	9.71	20,027,169	9.07	18,708,611
Kayaking	3.26	6,723,240	2.23	4,593,991
Rowing	4.48	9,234,883	4.08	8,411,523
Water-skiing	8.05	16,604,129	7.22	14,894,922
Bird Watching in Water-based Surroundings	30.15	62,168,196	16.84	34,718,973
Viewing Other Wildlife in Water-based Surroundings	22.42	46,233,771	20.20	41,641,844
Viewing or Photographing Scenery in Water-based Surroundings	37.00	76,283,314	24.76	51,046,395
Hunting Waterfowl	2.38	4,905,358	2.21	4,558,051

1. Estimated civilian non institutionalized population 16 years or older was 206,171,709 as of Sept. 1999.

Table 3. Participation in Coastal Recreation: Civilian Non Institutionalized Population 16 years and Older, Sept. 1999 – NSRE 2000, Version 1-6, Sample of 27,854 Households

Recreation Activity	Participation Rate (%)	Number of Participants
Visit Beaches	30.03	61,922,234
Visit Waterside Besides Beaches	4.50	9,269,685
Swimming	25.53	52,637,390
Snorkeling	5.07	10,459,568
Scuba Diving	1.35	2,786,215
Surfing	1.59	3,285,611
Wind Surfing	0.39	800,016
Saltwater Fishing	10.32	21,283,808
Motorboating	7.11	14,660,277
Sailing	2.98	6,136,163
Personal Watercraft Use	2.57	5,304,476
Canoeing	1.05	2,171,666
Kayaking	1.33	2,746,502
Rowing	0.53	1,098,999
Water-skiing	1.15	2,375,709
Bird Watching in Saltwater Surroundings	7.17	14,784,752
Viewing Other Wildlife in Saltwater Surroundings	6.45	13,303,288
Viewing or Photographing Scenery in Saltwater Surroundings	9.19	18,943,684
Hunting Waterfowl in Saltwater Surroundings	0.33	680,380
Any Coastal Activity <sup>1</sup>	43.30	89,270,965

1. For 19 activities, respondents were asked if they did the activity in freshwater, saltwater or both . For viewing activities or hunting for waterfowl, respondents were asked if they did the activity in a water-based surrounding that was freshwater, saltwater or both. Saltwater was defined as ocean or mixed fresh-salt water in tidal portions of rivers and bays.

Table 4. Participation in Any Coastal Recreation, By State <sup>1</sup>

State	Participation Rate (%)	Number of Participants	Rank
Florida	10.70	22,060,908	1
California	8.71	17,954,215	2

Rhode Island	0.07	135,507	9
South Carolina	0.08	174,365	5
Texas	0.10	207,032	4
Virginia	0.05	98,499	13
Washington	0.05	108,106	11
All Coastal States	5.55	11,437,650	

1. Includes participation in snorkeling or scuba diving and eliminates double counting across activities.

Table 7. Participation in Any Coastal Boating Activities, By State <sup>1</sup>

State	Participation Rate (%)	Number of Participants	Rank
Alabama	0.22	462,317	19
Alaska	0.28	572,274	17
California	1.59	3,282,124	2
Connecticut	0.32	669,563	16
Delaware	0.26	533,771	18
District of Columbia	0.02	36,012	24
Florida	2.41	4,969,624	1
Georgia	0.19	395,347	20
Hawaii	0.59	1,207,319	8
Louisiana	0.36	744,860	15
Maine	0.42	861,863	12
Maryland	0.73	1,512,423	3
Massachusetts	0.59	1,224,969	6
Mississippi	0.16	326,241	22
New Hampshire	0.19	385,596	21
New Jersey	0.59	1,218,066	7
New York	0.69	1,432,144	4
North Carolina	0.43	883,427	10
Oregon	0.11	226,461	23
Rhode Island	0.42	858,874	11
South Carolina	0.42	856,169	13
Texas	0.60	1,243,616	5
Virginia	0.46	951,963	9
Washington	0.39	800,016	14
All Coastal States	11.48	23,669,837	

1. Includes participation in motorboating, sailing, personal watercraft use, canoeing, kayaking, rowing or water-skiing and eliminates double counting across activities.

Table 8. Participation in Any Coastal Viewing Activities, By State <sup>1</sup>

State	Participation Rate (%)	Number of Participants	Rank
Alabama	0.40	831,331	21
Alaska	0.56	1,147,537	15
California	3.07	6,330,883	2
Connecticut	0.46	940,291	18
Delaware	0.35	712,620	22
District of Columbia	0.06	122,198	24
Florida	3.38	6,965,003	1
Georgia	0.44	915,311	20
Hawaii	0.94	1,933,533	8
Louisiana	0.47	974,595	17
Maine	0.89	1,833,825	11

Table 10. Comparative Profiles of Coastal Participants versus Others<sup>1</sup> (continued)

Demographic Characteristic	Non Coastal Water-related Participation		Coastal Water-related Participation		No Water-related Activity Participation	
	Mean	Median	Mean	Median	Mean	Median
<b>Household Size</b>	2.92	2	3.01	2	2.55	2
<b>Family Size</b>	2.87	2	2.94	2	2.48	2
16 years or older	2.14	2	2.26	2	1.96	2
6 years or younger	0.34	0	0.30	0	0.29	0
<b>Employment (% Yes)</b>	67.76		71.06		47.99	
full-time (% of employed)	75.63		73.78		75.87	
part-time (% of employed)	24.37		26.22		24.13	
	Mean	Median	Mean	Median	Mean	Median
<b>Hours of Work Per Week</b>	41.25	40	41.08	40	41.31	40
<b>Leisure time (hours per week)</b>	25.28	20	24.92	20	27.37	20
Not Employed or Part-time <sup>2</sup> (%)	50.09		48.57		64.49	
<b>Retired (% Yes)<sup>3</sup></b>	36.53	(18.30)	27.67	(13.44)	56.26	(36.30)
<b>Student (% Yes)</b>	27.85	(13.95)	40.41	(19.63)	12.19	(7.86)
<b>Full-time Homemaker (% Yes)</b>	37.06	(18.56)	30.40	(14.76)	47.03	(30.33)
<b>Urban (%)</b>	71.11		85.84		79.98	

1. Sample was divided into three groups; 1) those that did at least one of the 19 water-related activities, but only in freshwater or freshwater surroundings, 2) those that did at least one of the 19 water-related activities in saltwater or saltwater surroundings and 3) those that did none of the 19 water-related activities.
2. Those not employed or those that work less than 40 hours (part-time). Only these respondents were asked if they were retired, a student or a full-time homemaker.
3. First number is the percent of those that were asked the question and responded 'yes'. Number in parentheses is the percent of the entire sample that said 'yes', excluding don't knows and refusals.

## APPENDIX A:

### Participation in Coastal Recreation By Activity/Setting and State
